The Sport Concussion Assessment Tools – 3rd Edition (SCAT-3) are a set of tools to be completed by the patient/athlete, parent/caregiver and the clinician.

The components include:
- Sport Concussion Assessment Tool – 3rd Edition: Clinician Tool for patients 5-12 years old.
- Sport Concussion Assessment Tool – 3rd Edition: Clinician Tool for patients 13 years and older.
- Sport Concussion Assessment Tool – 3rd Edition: Parent symptom evaluation for patients 5-12 years old.
- Sport Concussion Assessment Tool – 3rd Edition: Self-administered symptom evaluation for patients 5-12 years old.
- Sport Concussion Assessment Tool – 3rd Edition: Self-administered background and symptom evaluation for patients 13 years and older.

The parent and self-administered components may be manually or automatically-assigned in CHADIS. To be auto-assigned, the SCAT-3 parent and self-administered questionnaires are listed as automatic assignments in a visit type.

The clinician tools must be manually assigned and completed by the clinician during the office visit. Outlined below is the workflow for the clinician to access and complete the SCAT-3 clinician tool.

- **Log into CHADIS.**
- **Search for the patient.**
• Click on the magnifying glass icon next to the patient.

• Click on Add Questionnaire

*** Since this CHADIS office has a Concussion Evaluation visit-type, the SCAT-3 Tool for the parent was auto-assigned when the parent logged into CHADIS earlier in the day.
• Choose the doctor or leave it as Unspecified.
• Leave Respondent as Any Respondent.
• Click the checkbox next to the appropriate tool.
• Scroll down and click Save.
• Click on Begin next to the Clinician SCAT-3.

• Take the Questionnaire as yourself.
• Click Next at the bottom of each screen.
• Complete and submit the questionnaire.
• Create the CHADIS Report to view the scored results.

Consult with your CHADIS Account Manager if you have any questions.
